Visual Reference

Analog Synthesizer Explorer

Companion to PRD + Build Instructions

1. Overall Aesthetic Direction

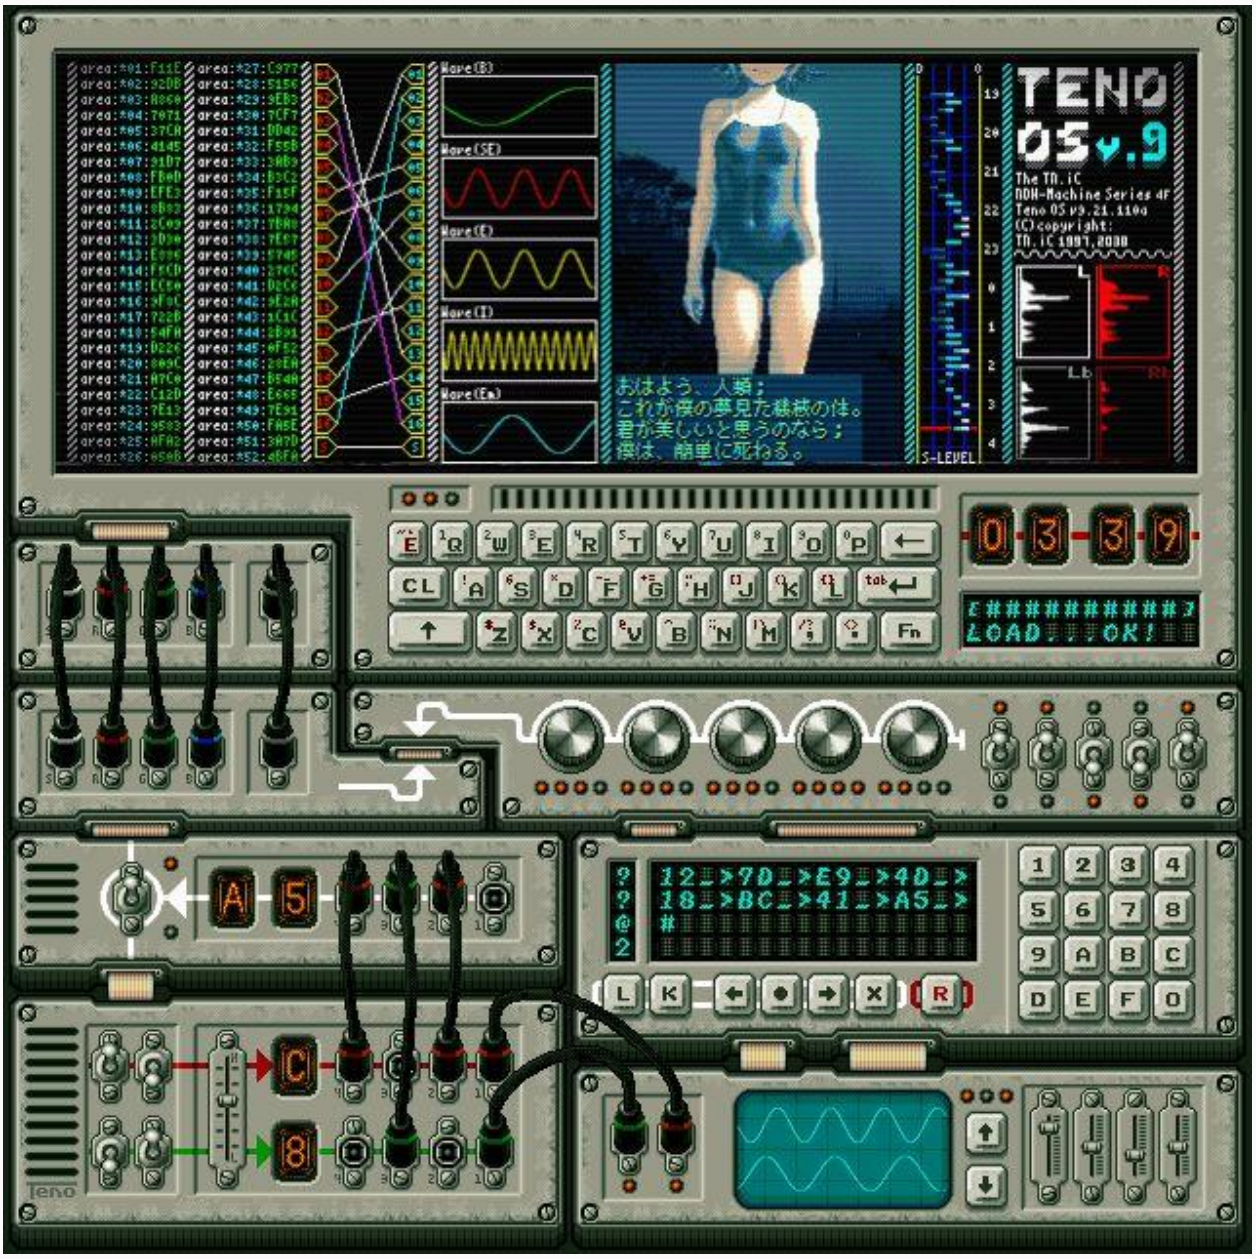
What should the synth feel like? Pick a direction or describe your own.

Theme:	*Light*
Vibe:	*Retro-futuristic*
Mood:	*Playful*

Describe the feeling in your own words (e.g. "like a vintage Moog synth but cleaner" or "like a Teenage Engineering product page"):
Like a vintage cyberpunk device – but with retro pixelated graphics

Reference Screenshots / Moodboard

Reference 1



I like the retro style of the device – the physical screws and vents.

I also like the waveform display at the bottom right

Reference 2

I like the design of the knobs and sliders and led lights

I like the font used to mark the knobs etc. on the device

I like the colors used in this – especially for the device

Reference 3

For the section where users can select a popular riff, or a preset voice – I want it to look like in the style of retro music player UI like this reference. It need not have all the controls like play pause shuffle etc – but I want that selection interaction to be on a retro style interface like this

2. Color Palette

Define the key colors. You can paste hex codes, color swatches, or just describe what you want.

Background:	*e.g. #1A1A2E or "very dark navy"*
Primary accent:	*e.g. #00FF88 or "neon green"*
Secondary accent:	*e.g. #FF6B6B or "warm coral"*
Text color:	*e.g. #FFFFFF or "off-white"*
Control surfaces:	*e.g. #2A2A4A or "slightly lighter than background"*

Any other color notes (e.g. "I want the oscilloscope to be green on black like a real scope" or "each synth section should have a subtle color tint"):

---

3. Typography

What fonts should the app use? Leave blank if you want Claude Code to choose.

Heading font:	*Space Mono*

Body/label font:	*Inter*
Number displays:	*Monospace*

Any typography notes:
I like the teenage engineering style typography

---

4. Control Style

How should the knobs, sliders, and toggles look and behave?

Knobs vs sliders:	*Mix (knobs for some, sliders for others – as per standard synth practices*

Control aesthetic:

similar to the controls in this reference image

Value display:

Show numbers on controls/device marking like in this reference image

Any control-specific notes:

I want the waveform selector to show actual wave shapes

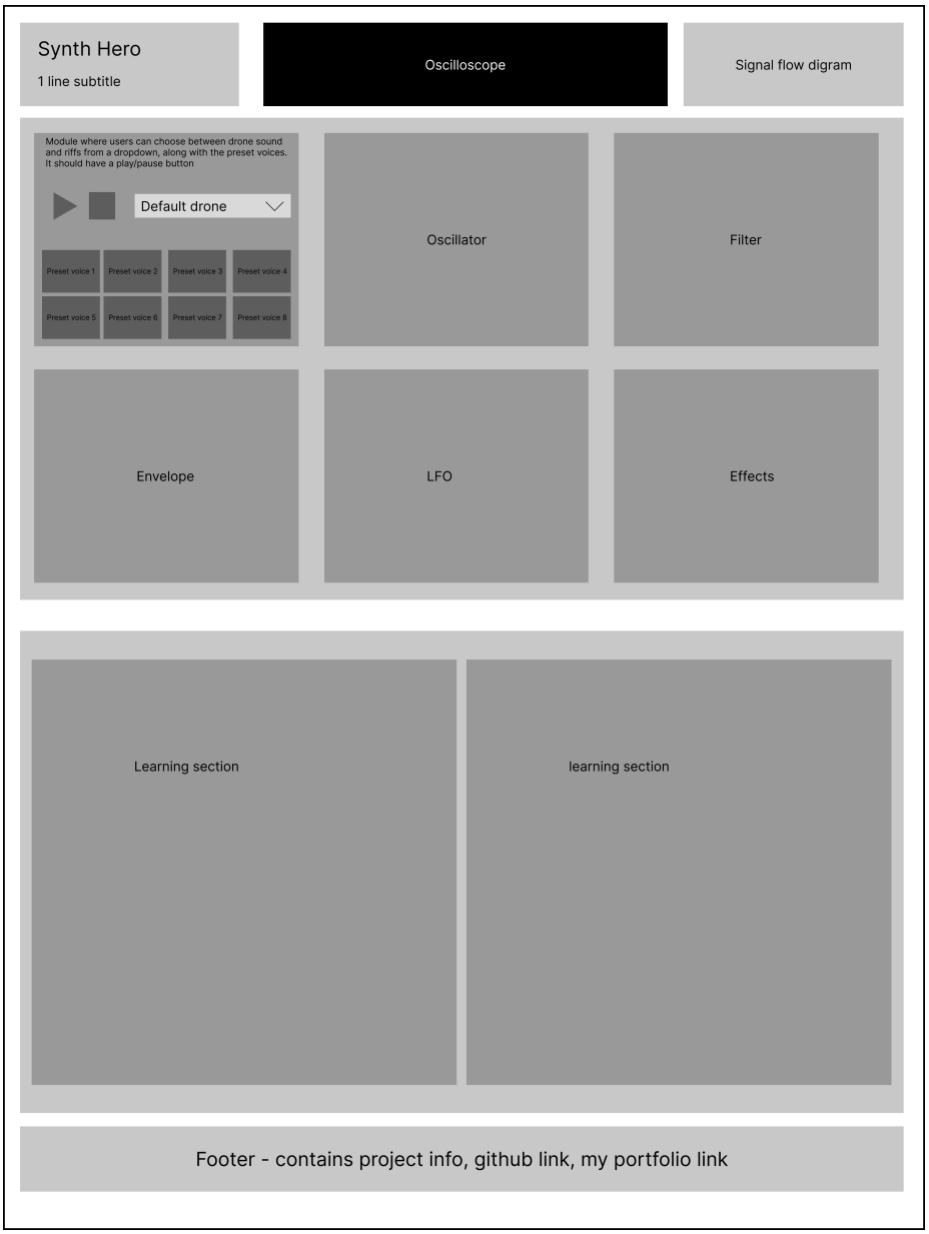
5. Layout & Spacing

How should the sections be arranged on the page? The PRD defines the information architecture — this is about the visual treatment.

Density:

I want the synth demo section to be above the fold, the learning section can be below the first fold and users can scroll to it

Wireframe / Layout Sketch

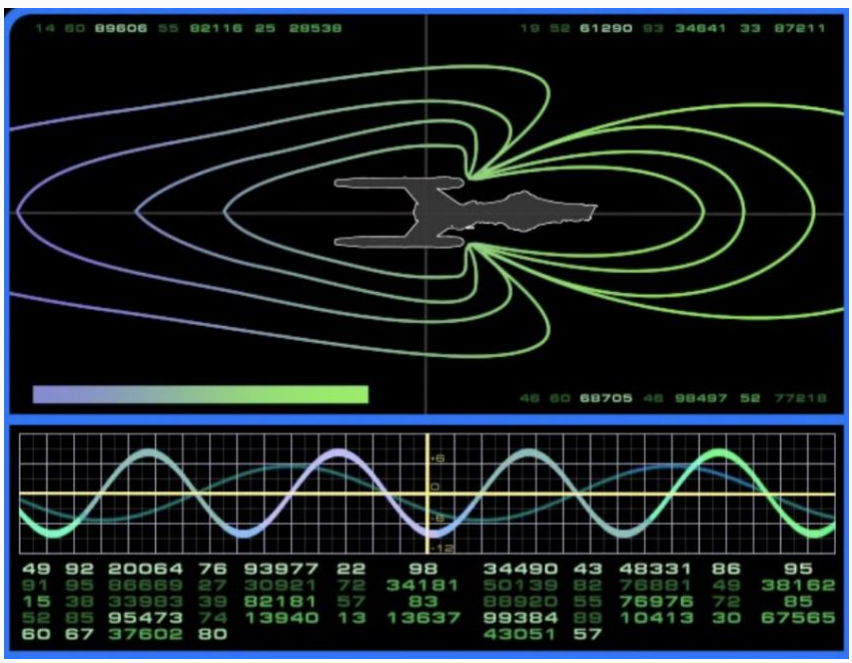


6. Oscilloscope / Visualizer

The live waveform display is a key visual element.

Style:	*Circle one: Classic green-on-black / Match accent color on dark / Colorful/gradient / No preference*
Size:	*Medium*
Line style:	*Thin crisp line*

Reference image



---

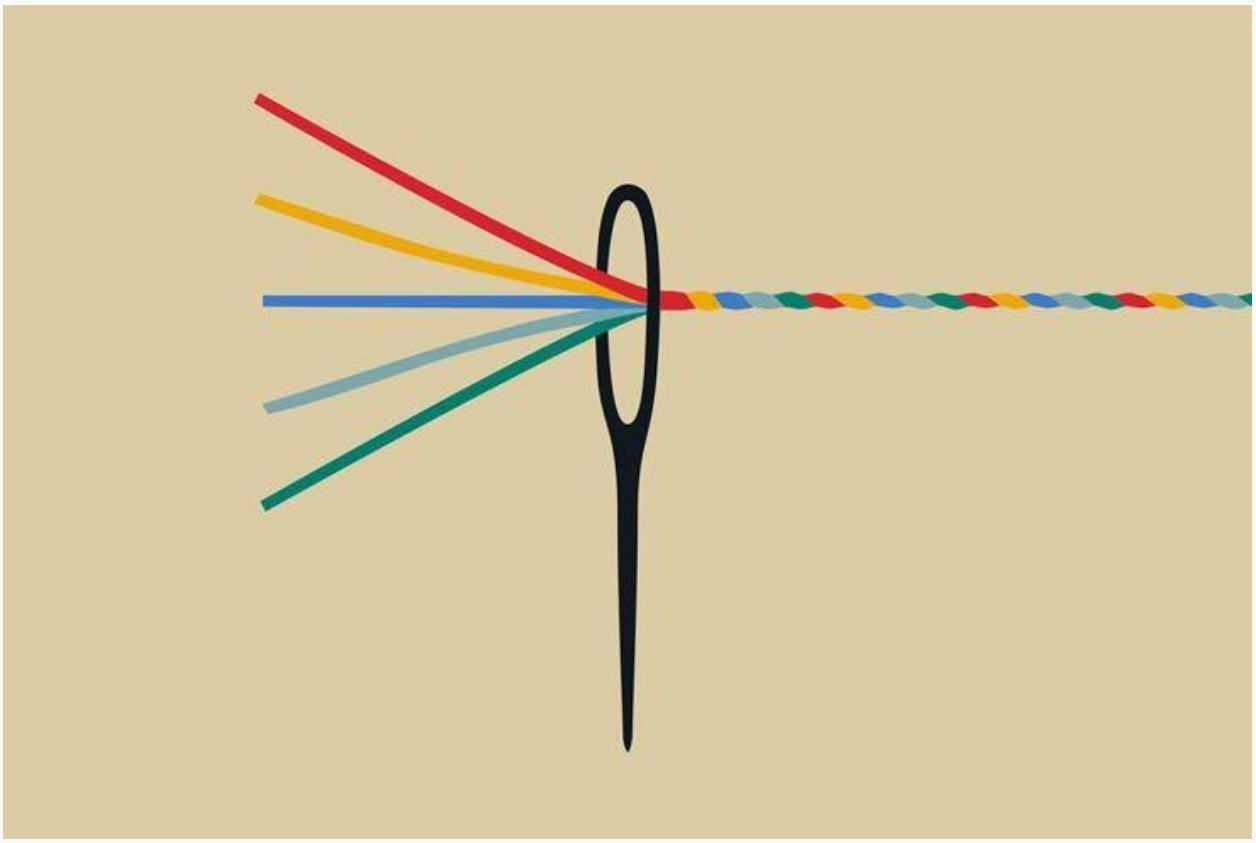
7. Learning Section

The static educational content below the synth.

Visual separation: *Clear divider between synth and learning*

Background: *Different (e.g. lighter section)*

Any notes on how the learning section should look and feel:

I want the style to be uniform and consistent with the section above it


It should be super simple and concise, with explainer diagrams for concepts like this reference -
